African Religions & Philosophy-John S. Mbiti 1959 "African Religions and Philosophy" is a systematic study of the attitudes of mind and belief that have evolved in the many societies of Africa. In this second edition, Dr Mbiti has updated his material to include the involvement of women in religion, and the potential utility to be found in was once thought to be a mass of quite separate religions. Mbiti adds a new dimension to the understanding of the history, thinking, and life throughout the African continent. Religion is approached from an African point of view but is as accessible to readers who belong to non-African societies as it is to those who have grown up in African nations. Since its first publication, this book has become an acknowledged standard as the work in standard of study, and it is essential reading for anyone concerned with African religion, history, philosophy, anthropology or general African studies.

The Philosophy of Religion and Advaita Vedanta-Arvind Sharma 1995 A cross-cultural examination of the well-known Hindu school of philosophy, Advaita Vedanta, in light of modern Western philosophy of religion. Western philosophy has long respected Indian philosophy as its Other. Philosophy of religion, as we know it today, emerged in the West and has been shaped by Western philosophical and theological trends, while the philosophical traditions of India flourished along its own course until the late nineteenth century, when active, if tentative, contact took place between the West and the East. This book provides a definite focus for this interaction by investigating issues raised in Western philosophy of religion by examining them in the Advaita Vedantic context. If profound metaphysical and epistemological questions have been central to thinkers throughout history, the concentration on the interaction between the East and the West in recent years has brought a resurgence of interest in the comparative study of religions. This book is the first of its kind and will provide a valuable resource for students of both philosophy and religion.

Experiment, Speculation and Religion in Early Modern Philosophy-Alberto Vanzo 2019-03-11 Experimental philosophy was an exciting and extraordinarily successful development that was not without its critics. This book explores the philosophical, scientific, and religious implications of the experimental approach to the study of religion in early modern Europe. The first six chapters of the book focus on the respective roles of experimental and speculative philosophy in individual seventeenth-century philosophers. They include Francis Bacon, Robert Boyle, Margaret Cavendish, Thomas Hobbes, John Locke and Isaac Newton. The next two chapters deal with the relation between experimental philosophy and religion with a special focus on hypotheses and natural religion. The penultimate chapter takes a broader European perspective and examines the paucity of concerns among early modern Western philosophers of the period. Finally, the concluding chapter draws all these individuals and themes together to provide a critical appraisal of recent scholarship on experimental philosophy. This book is the first collection of essays on the subject of early modern experimental philosophy. It will appeal to scholars and students of Philosophy and Religion, and will serve as an authoritative guide for all who are interested in the debates that took place in this seminal period in the history of philosophical thinking about religion.
