Social Intelligence—Daniel Goleman 2006-09-26 Emotional Intelligence was an international phenomenon, appearing on the New York Times bestseller list for over a year and selling more than five million copies worldwide. Now, once again, Daniel Goleman has written a groundbreaking synthesis of the latest findings in biology and brain science, revealing that we are “wired to connect” and the surprisingly deep impact of our relationships on every aspect of our lives. Far more than we are consciously aware, our daily encounters with parents, spouses, bosses, and even strangers shape our brains and affect cells throughout our bodies—down to the level of our genes—for good or ill. In Social Intelligence, Daniel Goleman explores an emerging new science with startling implications for our interpersonal world. Its most fundamental discovery: we are designed for sociability, constantly engaged in a “neural ballet” that connects us brain to brain with those around us. Our reactions to others, and theirs to us, have a far-reaching biological impact, sending out cascades of hormones that regulate everything from our hearts to our immune systems, making good relationships act like vitamins—and bad relationships like poisons. We can “catch” other people’s emotions the way we catch a cold, and the consequences of isolation or relentless social stress can be life-shortening.

Goleman explains the surprising accuracy of first impressions, the basis of charisma and emotional power, the complexity of sexual attraction, and how we detect lies. He describes the “dark side” of social intelligence, from narcissism to Machiavellianism and psychopathy. He also reveals our astonishing capacity for “mindsight,” as well as the tragedy of those, like autistic children, whose mindsight is impaired. Is there a way
to raise our children to be happy? What is the basis of a nourishing marriage? How can business leaders and teachers inspire the best in those they lead and teach? How can groups divided by prejudice and hatred come to live together in peace? The answers to these questions may not be as elusive as we once thought. And Goleman delivers his most heartening news with powerful conviction: we humans have a built-in bias toward empathy, cooperation, and altruism—provided we develop the social intelligence to nurture these capacities in ourselves and others.

**The Stress Effect**-Henry L. Thompson, Ph.D. 2010-04-06 Reveals the powerful and undermining effects of stress on good decision making—and what leaders can do about it. The ability to make sound and timely decisions is the mark of a good leader. But when leaders with otherwise strong track records suddenly begin making poor decisions—as seen in the recent corporate scandals that rocked the business world—the impact can be widespread. In *The Stress Effect*, leadership expert Henry L. Thompson argues that stress is often the real culprit behind this leadership failure: when leaders' stress levels become sufficiently elevated—whether in the boardroom or on the front line of a manufacturing process—their ability to effectively use their emotional intelligence and cognitive ability in tandem to make wise decisions is significantly impaired. Until now, experts have argued that increasing your emotional intelligence will help you cope with and manage stress. This book suggests that stress actually blocks access to your emotional intelligence as well as your cognitive ability, two critical components in the decision-making process. This book shows how stress adversely affects the performance of even the most savvy leaders. Reveals the truth about one of the prime factors behind the current failure of leadership. Offers a solid prescription for building a "stress resilient system" and arms leaders with best practices for managing specific stressors that take the biggest toll on decision making. Is written by an award-winning organizational psychologist and leadership consultant whose clients include a roster of Fortune 500 companies. A groundbreaking and insightful resource for leaders, *The Stress Effect* reopens the dialogue on stress, its effect on decision making, and what to do about it.
