

In Continuity The Last Essays Of Austin Warren Hardcover By Warren Austin

In Continuity-Austin Warren 1996 In Continuity collects more than twenty years of distinguished essays by Austin Warren and completes his trilogy that began with *Rage for Order* (1948) and *Connections* (1970). These last essays of Warren include discussions of the writings and philosophies of Allen Tate, Lewis Carroll, William Law, T. S. Eliot, W. H. Auden, Robert Herrick, Walter Pater, and Robert Frost, as well as an autobiographical essay on Warren's own religious influences. Through his essay collections and other literary studies, Warren helped shape generations of scholars; the approach represented here might best be called New England Common Sense New Criticism. With art and grace, this self-termed literary "generalist" reminds us through his lively prose of the continuity of great Western literature through the centuries, focusing in these essays on nineteenth- and twentieth-century authors.

Continuity and Discontinuity-S. Lewis Johnson 1988 Perspectives on the relationship between the Old and New Testaments as they concern theological systems, Mosaic law, salvation, hermeneutics, the people of God, and kingdom promises. From a respected group of modern theologians. The Architecture of Continuity-Lars Spuybroek 2008 The state of contemporary architecture is the product of a 150-year battle between the Polytechnic and the Fine Arts that has forced us into today's stalemate, one in which architecture is caught in the gaping chasm between a materialistic high-tech and an expressionistic formalism. Nevertheless, Spuybroek's aim is to mend such a rift by rethinking technology as part of our sensory apparatus, materiality as the realm of activity and agency, and structure as the product of genesis. Building on Gottfried Semper's materialist

theory of architecture, Spuybroek takes us from a philosophy of technology to a surprisingly historical argumentation that insistently revives the words of John Ruskin, William Hogarth and Wilhelm Worringer. The book includes several probing essays alongside extensive conversations in which we can see Spuybroek refine and sharpen his arguments. He makes statements such as 'No, I am not a Gothic Revivalist, but almost,' or 'We should use new instruments to address old architectural problems; not to create new problems,' and even 'We should reinvent tectonics, not do away with it.' In a period of calm with regard to architectural theorization this book makes a refreshing return to the basics, thereby realigning theory, methodology and architectural form.

Revolutions and Continuity in Greek Mathematics-Michalis Sialaros 2018-04-23 This volume brings together a number of leading scholars working in the field of ancient Greek mathematics to present their latest research. In their respective area of specialization, all contributors offer stimulating approaches to questions of historical and historiographical 'revolutions' and 'continuity'. Taken together, they provide a powerful lens for evaluating the applicability of Thomas Kuhn's ideas on 'scientific revolutions' to the discipline of ancient Greek mathematics. Besides the latest historiographical studies on 'geometrical algebra' and 'premodern algebra', the reader will find here some papers which offer new insights into the controversial relationship between Greek and pre-Hellenic mathematical practices. Some other contributions place emphasis on the other edge of the historical spectrum, by exploring historical lines of 'continuity' between ancient Greek, Byzantine and post-Hellenic mathematics. The terminology employed by Greek mathematicians, along with various non-textual and material elements, is another topic which some of the essays in the volume explore. Finally, the last three articles focus on a traditionally rich source on ancient Greek mathematics; namely the works of Plato and Aristotle.

Historical Materialism and Globalisation-Mark Rupert 2016-04-29 Now that Soviet style socialism has collapsed upon itself and liberal capitalism offers itself as the natural, necessary and absolute condition of human social life on a worldwide scale, this book insists that the potentially emancipatory resources of a renewed, and perhaps reconstructed, historical materialism are more relevant in today's world than ever before. Rather than viewing global capitalism as an eluctable natural force, these essays seek to show how a dialectic of power and resistance is at work in the contemporary global political economy, producing and contesting new realities and creating conditions in which new forms of collective self determination become thinkable and materially possible. It will be vital, topical reading for anyone interested in international relations, international

political economy, sociology and political theory.

The Diachronic Mind-M.V. Slors 2001-05-31 The Diachronic Mind makes an original contribution to current philosophical debates on the nature of personal identity and the reducibility of the mind. It traces traditional problems facing psychological continuity theories of personal identity to the ease with which theorists of personal identity adopt and apply a sometimes naive physicalism about the mind. This novel diagnosis opens that way to new solutions to traditional problems in the debate on the psychological criterion of personal identity. Through these solutions, an unorthodox version of nonreductive physicalism about the mind-brain relation is developed that avoids the recurrent epiphenomenalism objection to such positions. The book is written in a crisp style that presupposes no more than an elementary knowledge of philosophy. It is intended for students and professional philosophers alike.

Essays on the Theory of Numbers-Richard Dedekind 2015-07-27 Excerpt from Essays on the Theory of Numbers: I. Continuity and Irrational Numbers, II. The Nature and Meaning of Numbers My attention was first directed toward the considerations which form the subject of the pamphlet in the autumn of 1858. As professor in the Polytechnic School in Zurich I found myself for the first time obliged to lecture upon the elements of the differential calculus and felt more keenly than ever before the lack of a really scientific foundation for arithmetic. In discussing the notion of the approach of a variable magnitude to a fixed limiting value, and especially in proving the theorem that every magnitude which grows continually, but not beyond all limits, must certainly approach a limiting value, I had recourse to geometric evidences. Even now such resort to geometric intuition in a first presentation of the differential calculus, I regard as exceedingly useful, from the didactic standpoint, and indeed indispensable, if one does not wish to lose too much time. But that this form of introduction into the differential calculus can make no claim to being scientific, no one will deny. Growing Wings to Overcome Gravity-George A. Panichas 1999 Writers of novels, plays, and poems use their imagination with an evident freedom; by contrast, makers of Christian doctrine seem to impose limits, reducing the open-ended meaning of images to exact concepts and summing up the loose ends of stories in one unified Story. But the author of this study sets out to show how images and stories in literature can actually help the theologian to make doctrinal statements, while at the same time careful theological thinking can assist the critical reading of literary texts. Such a dialogue is worked out in studies of the poetry, of William Blake and Gerard Manley Hopkins, and the novels of D. H. Lawrence, Iris Murdoch, and William Going. Here the tension between the freedom of imagination and the limits of doctrine is seen to be only a part of more far-reaching tensions of freedom in human life, which account for a sense of 'fallenness', and which a dialogue between literature and Christian doctrine can do much to illuminate. In all this, the relationship between imagination and revelation is never far from the center of the discussion.

Essays on the Theory of Numbers-Richard Dedekind 1901

Continuity and Discontinuity (Essays in Honor of S. Lewis Johnson, Jr.)-John S. Feinberg 1988-05-01 Evangelicals agree that the Bible is God's inerrant word. But we sometimes differ on how to relate the messages of the Old and New Testaments. Without a basic understanding of this crucial matter, it is difficult to know how to use the Testaments to formulate either doctrine or practice. For example: Was Israel the OT Church—are OT promises to God's national people fulfilled in the church today? Or, is Mosaic Law binding on believers now—are twentieth-century Christians to obey

the Ten Commandments, including sabbath observance? In this book, thirteen noted evangelical theologians discuss, fairly but clearly, the continuity/discontinuity debate in regard to six basic categories: theological systems, hermeneutics, salvation, the Law of God, the people of God, and kingdom promises. Covering much more than the differences between Covenant Theology and Dispensationalism, this work of distinguished evangelical scholarship will fuel much profitable study and discussion.

Joseph Conrad-George A. Panichas 2005 "Guiding a reader's travels to the furthest realms of Conrad's imagination so as to penetrate to the heart of the novelist's moral vision is one of the author's dominant aims. Anyone disturbed by post-modernist advocates of a New World Order has much to ponder in this challenging book."--BOOK JACKET.
